# Overview

**1. Project Description**

**2. Problem Statement**

**3. Motivation**

**4. Scope**

# Project Description

- Emergency response system for notifying individuals in nearby region incase of an emergency
- Users create emergency profile with personal information, emergency contacts, and medical information
- App sends notification to nearby users and emergency services
- GPS technology used to identify user location

# Problem statement

To develop an emergency alert system to send emergency alerts to nearby users, authorities and emergency contacts, along with real-time location and relevant medical information with an easy to access alert button.

# Motivation

- Develop an emergency response system that can help save lives
- Provide a fast and efficient way for individuals to alert nearby people and emergency services in case of an emergency
- Make a positive impact a society by providing a way to show helping mentality

# Scope

- Create a emergency profile with relevant medical and contact information
- Send real-time location and information to nearby users
- Provide an easy to access panic button

# THANK YOU
